DETAILED ACTION

Election/Restrictions

Claims 15-25 and 41-44 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 5/4/04.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In Claim 1, the addition of the first conductor causes the phrase "at least one electrical conductor" in line 14 and "the conductor in the penultimate line to lack antecedent basis.

Claim Rejections - 35 USC § 102

Claims 1-14 and 26-40 stand rejected under 35 U.S.C. 102(b) as being clearly anticipated by Bonner et al., US 5,968,086.

Applicant's argue that Bonner does not disclose conduction through myocardial tissue to a passive conductor assembly. However, the claims do not specifically call for a passive assembly. For example, Claim 1 requires an intracavitarily disposed electrode and at least one conductor with first and second

contacts thereon. The claim is broad enough to allow one to read a single lead with a defibrillation/cardioversion electrode and 2 pacing electrodes with respective conductors as the electrode and first conductor as claimed, but even if the intracavitary electrode were read to be different structurally from the "first conductor", Bonner still meets the claim. Note column 4, lines 28-36, wherein alternate cardioversion electrodes can be disposed on separate leads or on the housing. In the latter embodiments, electrodes on the housing would provide passive return electrodes for the cardioversion pulses originating in the lead(s) placed intracavitarily, e.g. the Figure 2 lead, which is the standard operation in a monopolar, i.e. not bipolar, stimulation arrangement with the housing being the "passive" return electrode. This stimulation clearly goes "through" myocardial tissue as claimed. Alternatively, it is inherent that in a bipolar cardioversion mode, the "separate leads" would be used as the "passive" return electrodes, thus providing an instance wherein an intracavitarily disposed electrode delivers a stimulus to first and second contacts of a separate lead.

As such, Applicants arguments are not deemed to be persuasive. This rejection is hereby made FINAL.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

The rejections under 35 USC 103 have not been addressed as the corresponding claims have been withdrawn from consideration.
